Application Note 1127 LVDS Display Interface (LDI) TFT Data Mapping for

Interoperability with FPD-Link

Literature Number: SNLA014

LVDS Display Interface (LDI) TFT Data Mapping for Interoperability with **FPD-Link**

HOW TO READ THE TABLES

(LD Inte) TF	T Dat rabili	Interfa a Map ty with	oing f		Appli Micha	nal Semic cation Not ael Hinh ember 199	e 1127			R		
The pu mappin play into or 24-b used, s plicatio cant bii Only th 18-bit F LVDS of 24-bit a The tab LVDS of cations noted fib bit). VC G0. This definition This coll bit map LVDS t	TRODUCTION e purpose of this application note is to provide the data apping to ensure interoperability between the LVDS dis- ay interface (DS90C387/DS90CF388 chipset) and 18-bit 24-bit FPD-Link devices. This data mapping must be ed, so that the most significant bits (MSB) for an 18-bit ap- cation are mapped exactly the same as the most signifi- nt bits in the 24-bit application from the VGA controllers. Ny three LVDS serialized data lines are required for an -bit FPD-Link application while a 24-bit application uses 4 DS data lines. The additional least significant bits in the -bit application are mapped to the 4th LVDS data line. e tables below show the connections needed when using DS chipsets (LDI or FPD-Link) for flat panel display appli- tions. Starting from the left, the outputs of the VGA are ted from LSB (less significant bit) to MSB (most significant). VGA controllers typically name the LSB as R0, B0, and 0. The MSB remains the same from the VGA controller pin finition, but 24-bit and 18-bit color are named differently. is confuses the connections needed, so careful review of a following tables is recommended to ensure correct color mapping. DS transmitters are available for 18-bit (i.e., DS90C365), -bit (i.e., DS90C385) and 24/48-bit (i.e., DS90C387) appli-						s to the trassignal pos lso availal (CF384A) ample the s bit informa from an ges the na dded. In a single pixel application, the 48-bit Tx and Rx should be set for single pixel mode (DUAL=low). This disables half the inputs and outputs signals reducing the power dissipation of the chipset.

Note: O = Odd (First) Pixel, E = Even (Second) Pixel

The color mapping recommended for a dual pixel application requires 2 FPD-Link transmitters and/or receivers for 24-bit or 18-bit applications or 1 LDI chipset. The table does not show the DS90C387 (48-bit) transmitter's output. The DS90C387 provides 2 LVDS output clocks to support two 24-bit or two 18-bit FPD-Link receivers.

Table 3 shows how the input signals (single pixel) are split into odd (first) and even (second) pixels (dual pixels). This is only supported with an even number of cycles during blanking (blanking occurs when DE = low). A single input is split into odd and even pixel data starting with the odd (first) pixel outputs (A0-A3). The next pixel goes to the even pixel outputs (A4-A7). The splitting of the data signal also starts with DE (data enable) transitioning from logic low to high indicating active data. Under this condition the 'R FDE' pin must be set high.

Data Signal	24-bit Tx (C385)	18-bit Tx (C365)	48-bit Tx (C387)		24-bit Rx (CF384A)	18-bit Rx (CF364A)	48-bit Rx (CF388)	18/36-bit	24/48-bit
HSYNC	Txin24	Txin18	HSYNC		Rxout24	Rxout18	HSYNC	HSYNC	
VSYNC	Txin25	Txin19	VSYNC		Rxout25	Rxout19	VSYNC	VSYNC	
DEN	Txin26	Txin20	DE		Rxout26	Rxout20	DE	DEN	
CLK	TxCLKin	TxCLKin	CLKIN		TxCLKout	TxCLKout	CLKOUT	CLK	

In the backward compatible (LDI) mode and for FPD-Link, control signals (DE, HYSNC, and VSYNC) are sent as regular data bits. *Table 4* above shows the mapping of the control signals for FPD-Link and LDI chipsets.

CONCLUSION

Using the recommended color mapping, interoperability is obtained between FPD-Link devices and the LDI chipset. It is also possible to directly interface a 24-bit VGA to an 18-bit panel as the additional LSB color bits are mapped to separate LVDS data lines. The LDI chipset supports two basic modes of operation. The first is a backward compatible mode, which supports the direct connection with FPD-Link devices as described above. The other mode, supports additional features that enhance cable drive capability of the transmitter by adding DC Balancing the data lines and also by providing, pre-emphasis and a cable de-skew operation. This new "LDI" mode is described in the DS90C387/DS90CF388 datasheet.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

- Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
- A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

National does not assume any responsibility for use of any circuitry described, no circuit patent licenses are implied and National reserves the right at any time without notice to change said circuitry and specifications.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
